

Definition: Type-0

A phase structure grammar / Unrestricted grammar / Recursively enumerable grammar is a portable 4-tuple grammar.

$$G = (V, T, p, s) \text{ or } G = (N, T, p, s)$$

where,

$$(e, \varphi_W) = \mathbb{R}$$

If the production rules is of the form,  $\alpha \xrightarrow{P_i, T, U} \beta$

where  $\alpha \in (V+T)^*$  and  $\beta \in (V+T)^*$

Examples:  $a'Ab \rightarrow b$ ,  $aAb \rightarrow b$  &  $aAb \rightarrow b$  derived  
~~to basic basic word~~  
~~(written form)~~  $QA \rightarrow e$ ,  $(ab/b/0/1)$  strings should be in terminal symbols

Language generated by Grammar  $G$  is set of terminal symbols

in the grammar from Start Symbol

Startsymbol  
 $S \rightarrow aSc$   
 $S \rightarrow aAc$

$$G = (V, T, P, S)$$

- 50 -

$T = \{a, b, c\}$

$$V = \{S, A\}$$

$\Rightarrow$   $\text{ASC}$

$\Rightarrow \text{acc}$

→ data (v)  
→ oakas

⇒ .abc

• Generate a String dabcc using ~~char~~ ~~int~~ ~~base~~

grammer  $G_1 = \{V, T, P, S\}$ , where  
 $S \in V$ ,  $T = \{a, b, l\}$

$V = \text{variables } \{S, A\}, I = \{x_1, x_2, \dots\}$

$$p = \{asc, aAc, b\}$$

## Type-1 Grammar

$A \rightarrow E$ , Not allowed

If the production rules are of the form  $dA, B \rightarrow d\alpha B$

where  $\alpha, B \in (NUT)^*$ ,  $\rightarrow$  There can be null derivation.

$A \in N,$

$\alpha \in (T \cup N)^*$   $\rightarrow$  These consist of atleast one terminal or variable.

is called Type-1 Grammar or Context Sensitive grammar.

Non-contracting grammar

$\rightarrow$  CSG  
 $\downarrow$   
 $(NUT)^*$  CS LGR

length of u  $\leq$  length of v  $\rightarrow$  Linear bounded automator

If in a production rule  $U \rightarrow V$ ,  $|U| \leq |V|$  grammar is

called length-increasing grammar.

Examples: 1.  $aAb \rightarrow bbb$  satisfies CSG

2.  $AA \rightarrow b$  not CSG.

e.g.: Generate a String  $ab^2cd^2$  using the production rules are

$S \rightarrow aAB \mid ab$   $T = \{a, b, c, d\}$

$A \rightarrow AAX \mid ax$   $V = \{A, B, X, Y\}$

$B \rightarrow bBD \mid bYd$

$x \rightarrow bx$

$XY \rightarrow YC$

$Y \rightarrow C$

$S \Rightarrow aB \text{ (2)}$

$\Rightarrow abyd \text{ (6)}$

$\Rightarrow abcd \text{ (7)}$

or

$S \Rightarrow aAB \text{ (3)}$

$\Rightarrow aaxB$

$\Rightarrow aaxbBd$

$\Rightarrow aabxBd$

$\Rightarrow aabxydd$

$\Rightarrow aabxcddd$ .

$\Rightarrow aa$

$\Rightarrow aab$

$\Rightarrow abab$

## \* Type-2 Grammar

If in a grammar, rules are of the form  $A \rightarrow \alpha$  where  $A \in N$  and  $\alpha \in (N \cup T)^*$ , grammar is called Context-free Grammar (CFG).

Type-2 grammar Context-free Grammer (CFG)

Language generated by CFG is called Context-free Language (CFL).

and then machine required is Pushdown Automaton.

$$A \rightarrow \alpha$$

$A \in N, \alpha \in (N \cup T)^*$

Example: 1.  $D \rightarrow E$

2.  $A \rightarrow BCD$

Adv: Multiple variables can be present at accepted by machine

e.g. ①  $G = (V, T, P, S)$

$$V = \{S, A, B\}$$

$$T = \{0, 1\}$$

$$P = \{S \rightarrow 0B, A \rightarrow 1AA | \epsilon, B \rightarrow 0AA\}$$

## Types of Derivation Trees

- ① Left most Derivation Tree
- ② Right most Derivation Tree
- ③ LDT: Obtained by Applying productions to leftmost variable in each step

- ④ RDT: Obtained by applying productions to rightmost variable

in each step.

Derive Left Derivation Tree and Right Derivation Tree for the

following grammar.  $S \rightarrow aAs \mid s \epsilon$

$$A \rightarrow sBA \mid ba$$

Q: Is it leftmost derivation or rightmost derivation?

$S \Rightarrow$

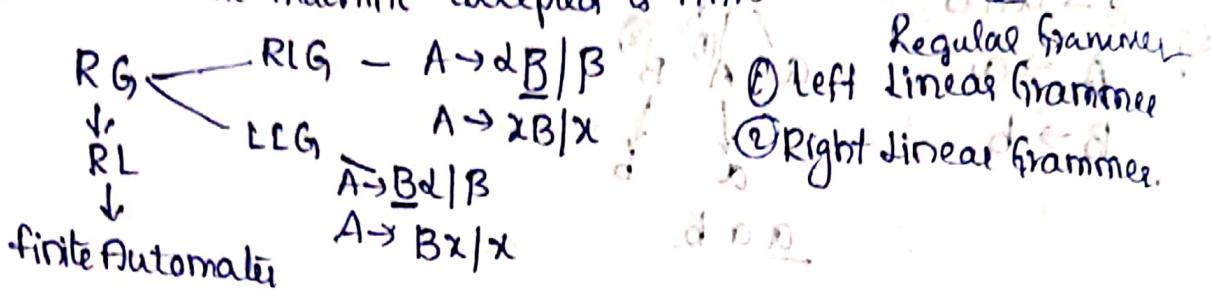

$$\begin{array}{c} aAs \quad \text{Leftmost derivation} \\ | \\ SAs \quad \text{Rightmost derivation} \\ | \\ aAs \quad \text{Leftmost derivation} \\ | \\ As \quad \text{Rightmost derivation} \\ | \\ s \end{array}$$

### Type-3 Grammer:

If the production rules are of the form  $A \rightarrow \alpha B$  and  $A \rightarrow \alpha$ , where  $A, B \in N$  and  $\alpha, \beta \in T^*$ , is called Right Linear grammar or Type-3.

Grammer and language generated is called Type-3 language.

Regular set the machine accepted is finite automata.

If the production rule of the form  $A \rightarrow \cdot B\alpha / \beta$  or  $A \rightarrow B\alpha / \cdot$ .

$A \rightarrow \alpha B \& A \rightarrow \beta$  is called left linear grammar  
 $A, B \in N$   
 $\alpha, \beta \in T^*$

If all the production rules of the form  $A \rightarrow \alpha B$  that is if the terminal symbol are to be left of non-terminal symbol, then this grammar is called Right Regular Grammer.

If the production rules of the form  $A \rightarrow B\alpha$  i.e., if the terminal symbol are to be right of the non-terminal symbol, it is called Left Regular Grammer.

eg : ①  $S \rightarrow aS$       ②  $S \rightarrow AB$   
 $S \rightarrow bS$        $A \rightarrow a$  } ab  
 $S \rightarrow \epsilon$        $B \rightarrow b$

$$\begin{array}{l} S \rightarrow AB \\ S \rightarrow aB \\ \hline \underline{\underline{\Rightarrow ab}} \end{array}$$

$$3. S \rightarrow AB$$

$$A \rightarrow aA/a$$

$$B \rightarrow bB/b$$

$$a^m b^n$$

$$m \geq 0,$$

$$n \geq 0.$$

Finite Automata  $\begin{cases} \text{with O/P} \\ \text{without O/P} \end{cases}$

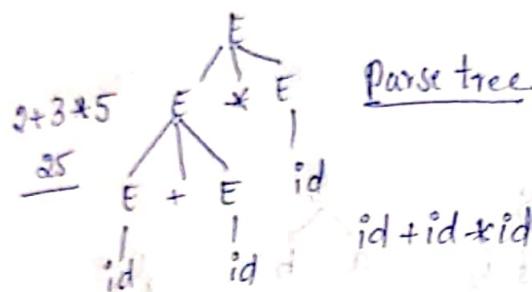

$$\begin{array}{l} E \rightarrow E+E \\ E \rightarrow E * E \\ E \rightarrow id \end{array}$$

$\left. \begin{array}{l} \text{productions} \\ \text{sequential form} \end{array} \right\}$  centential or sequential form

Grammer  
Ambiguous  
(having more than two forms)  
unAmbiguous  
only one form

$$\begin{array}{c} E \\ | \\ E+E \\ | \\ id * E \\ | \\ id + id * id \end{array}$$

$2+3*5$   
 $\frac{25}{25}$   
 $id + id * id$

$E \rightarrow$  Expression  
→ Combination of different expressions  
→ can be an identifier

### Ambiguity / Ambiguous grammar:

In grammar  $g = (N, T, P, S)$ , a string in language  $L(G)$  is said to be ambiguous or ambiguously derived, if it has 2 or more different derivation trees.

eg: ①  $\left. \begin{array}{l} \text{centential forms} \\ \text{or} \\ \text{sequential forms} \end{array} \right\}$   $\begin{array}{l} E \rightarrow E+E \\ E \rightarrow E * E \\ E \rightarrow id \end{array}$   $\begin{array}{l} \text{production} \\ \text{rules} \end{array}$   $V = \{E\}$   $T = \{id, *, +\}$

In any derived tree the lower level elements have higher associativity.

②  $S \rightarrow asb | bsa | ss | \epsilon$ , derive string abab

$$\begin{array}{l} S \rightarrow asb \\ S \rightarrow bsa \\ S \rightarrow ss \\ S \rightarrow \epsilon \end{array}$$

(1)  $S$   
 $S$   $\nearrow$   $\searrow$   
 $a$   $s$   $b$   $a$   $s$   $b$   
 $abab$

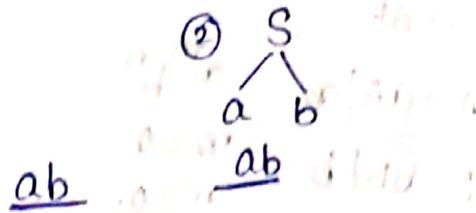

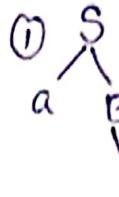

(2)  $S$   
 $S$   $\nearrow$   $\searrow$   
 $a$   $s$   $b$   
 $b$   $s$   $a$   
 $abab$   
 $\epsilon$

3)  $S \rightarrow aB \mid ab$

$A \rightarrow aAB$

$B \rightarrow Abb \mid b$

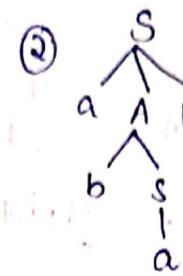

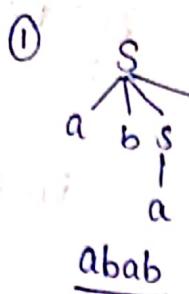

abb

4)  $S \rightarrow a \mid aAb \mid abSb$

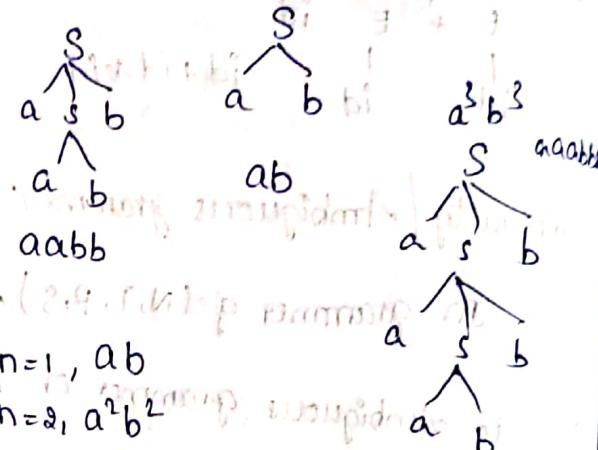

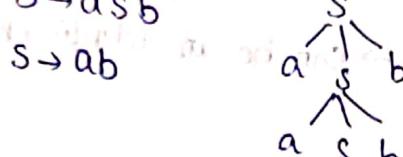

$A \rightarrow aAA \mid b$

abab

abab

5)  $S \rightarrow asb$

$L = \{a^n b^n \mid n \geq 1\}$  where  $n=1, ab$

$n=2, a^2 b^2$

Infinite no. of strings.

Each and every string will generate different forms is called inherently ambiguous language. (This is unambiguous)

Consider grammar  $G_1$  with the production rules

$S \rightarrow asb$ , derive the string:  $a \overline{s} b (a^2 b^2)$

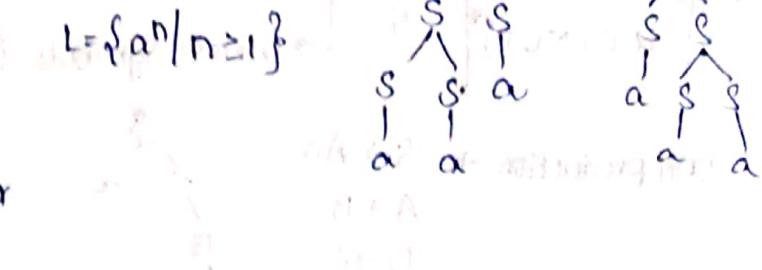

$S \rightarrow ab$

Here language is  $L = \{a^n b^n \mid n \geq 1\}$

Each  $a^n b^n$  as unique derivation where rule 1 is used  $(n-1)$  times

and rules used once at the end depending on the n value  
hence grammar is unambiguous.

simple grammar:  $S \rightarrow ss$   
 $a^3(aaa) \quad S \rightarrow a$

### Ambiguous Grammar

#### Inherently ambiguous:

A language may have grammars  $G_1, G_2, \dots, G_n$ , if all of them are ambiguous then language L is said to be inherently ambiguous.

#### Inherently Ambiguous:

[length increases no. of derivation trees also increases.]

$a^3 = aaa, a^4 = aaaa]$

consider grammar  $G_1$  having rules  $S \rightarrow SS$  then  $a^3$  has

a different derivation trees and  $a^4$  has

$a^4$  has 5 derivation trees and  $a^5$  consists of 14 derivation trees.

finally, as the length increases number of derivation trees also increases.

→ Whether the grammar is ambiguous or not?  $A(\beta \in A)$

→ show that CFG  $S \rightarrow ss/a/b$  is ambiguous

a)  $S \rightarrow \epsilon$

$S \rightarrow asb$

$S \rightarrow bsa$

$S \rightarrow ss$

b)  $S \rightarrow AA$

$A \rightarrow AAA$

$A \rightarrow bA$

$A \rightarrow Ab$

$A \rightarrow a$

c)  $S \rightarrow A$

$S \rightarrow asb$

$S \rightarrow bsa$

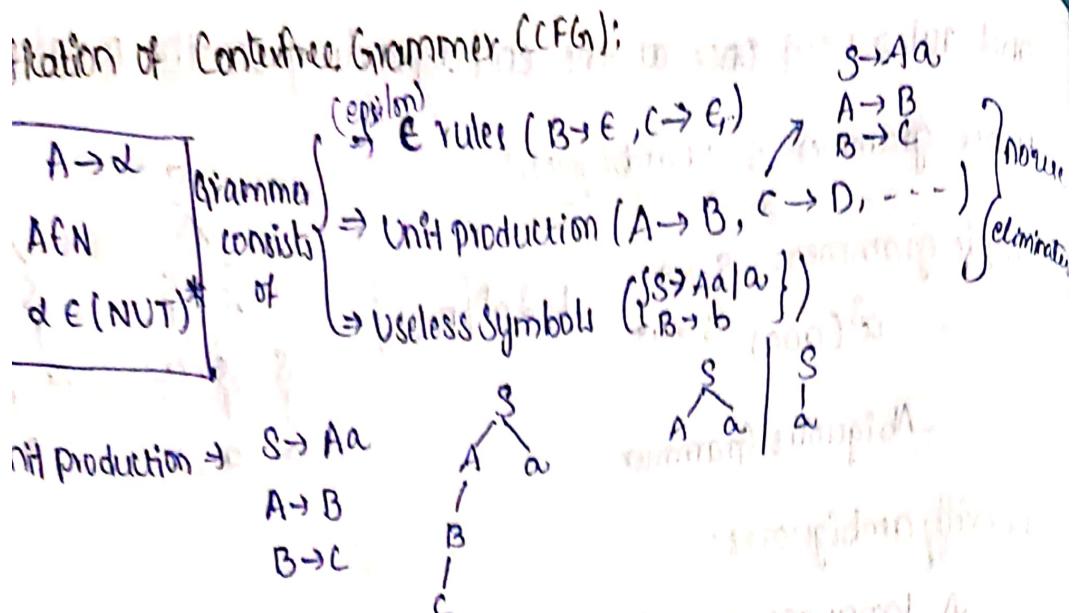

$A \rightarrow Aa$

$A \rightarrow a$

②  $L = \{a^n b^n c^p | n, p \geq 1\}$

③  $L = \{a^n b^m c^m | n, m \geq 1\}$

④  $L = \{a^n b^m c^p | n, m, p \geq 1, n=m \text{ or } m=p\}$

⇒ Simplification of Contextfree Grammar!

Simplification is done on productions and symbols of grammar.

modify grammar by removing the following rules.

1. presence of  $\epsilon$  rules in any production.

2. unit rule productions and

3. Useless Symbols.

1. Remove symbols not deriving terminal strings and

2. Remove symbols not reachable from  $S$ .

1. Removal of  $\epsilon$ -rules or  $\epsilon$  productions: (Epsilon- $\epsilon$ )

Any production of the form  $A \rightarrow \epsilon$  is called  $\epsilon$ -rule.

If  $A \xrightarrow{*} \epsilon$ ,  $A$  ( $\xrightarrow{*}$ -no. of steps),  $A$  is a nullable symbol

$$S \rightarrow A \quad A \rightarrow \epsilon$$

Steps to remove nullable variables:

$$S \rightarrow aSb | aAb | ab$$

$$A \rightarrow \epsilon$$

- ① Find all nullable variables.
- ② Create two ~~versions~~ of all production containing nullable variables on their RHS, one without and one with null variables.

③ Remove  $\epsilon$ -productions.

④ productions whose RHS does not have any null variable are included directly.

i.  $S \rightarrow aSb \mid aNb \mid ab$

$A \rightarrow E$

1) Nullable variable  $\rightarrow \{A\}$

2)  $S \rightarrow aSb \mid ab$  } two versions  
 $S \rightarrow aNb$

3) Remove  $E$  production

$-A \rightarrow E$

Before removing  $E$  we have

to try to replace in RHS  $E$  & substituting  $E$  with null production

ii.  $S \rightarrow aSb \mid ab$

1. Nullable variable

g.  $S \rightarrow AB$

$A \rightarrow aAA \mid E$

$B \rightarrow bBB \mid E$

$S \rightarrow AB$

$A \rightarrow aAA$

$B \rightarrow bBB$

$A \rightarrow E$

$B \rightarrow E$

2.  $S \rightarrow AB$

$A \rightarrow aAA$

$B \rightarrow bBB$

$A \rightarrow E$

$B \rightarrow E$

3.  $S \rightarrow AB \mid B \mid A \mid E$

$A \rightarrow aAA \mid aA \mid a$

$B \rightarrow bBB \mid bB \mid b$

$S \rightarrow eAB \mid A$

$A \rightarrow E$

$B \rightarrow E$

4.

①  $S \rightarrow aS \mid bS \mid E$ , eliminate  $E$ -Production if any

②  $S \rightarrow ABAC$

$A \rightarrow aAE$

$B \rightarrow bB \mid E$

$C \rightarrow c$

③  $S \rightarrow bEf$

$E \rightarrow BEC$

$E \rightarrow GGC$

$G \rightarrow b$

$G \rightarrow KL$

$K \rightarrow CKd$

$K \rightarrow E$

$L \rightarrow dLe$

$L \rightarrow E$

④  $S \rightarrow ese$

$S \rightarrow GH$

$G \rightarrow CGb$

$G \rightarrow e$

$H \rightarrow JHD$

$H \rightarrow E$

$J \rightarrow bJ$

$J \rightarrow fJ$

$f \rightarrow A$

Scanned with CamScanner

## Removal of unit productions: $\alpha \rightarrow \beta$ , $\alpha, \beta \in N/V$

$A \rightarrow B$   
 $B \rightarrow C$  } unit  
 $D \rightarrow E$  } Productions

Any rule of the form  $\alpha \rightarrow B$  or  $x \rightarrow Y$ , where  $\alpha, \beta \in N/V$

Steps for Removal of Unit productions:

1. There exists a uniproduction  $A \rightarrow B$ , select unit production  $A \rightarrow B$

such that there exists a production  $B \rightarrow X$ ,  $X$  is terminal

2. For every non-unit Production  $B \rightarrow X$ , Add production  $A \rightarrow X$  to

grammar and eliminate  $A \rightarrow B$ .

	unit productions	
$S \rightarrow AB$	$B \rightarrow C$	$S \rightarrow AB$
$A \rightarrow a$	$C \rightarrow D$	$A \rightarrow a$
$B \rightarrow C/b$	$D \rightarrow E$	$B \rightarrow b/a$
$C \rightarrow D$		$c \rightarrow a$
$D \rightarrow E$	$B \rightarrow C \rightarrow D \rightarrow E \rightarrow a$	$D \rightarrow a$
$E \rightarrow a$	$C \rightarrow D \rightarrow E \rightarrow a$	$e \rightarrow a$
	$D \rightarrow E \rightarrow a$	
$NT = \{S, A, B, C\}$	$\underline{D \rightarrow E \rightarrow a}$	

	unit productions	
$S \rightarrow 0A1 \sqcup B1c$	$S \rightarrow c$	$S \rightarrow 0A1 \sqcup B1c01$
$A \rightarrow 0S100$	$B \rightarrow A$	$A \rightarrow 0S100$
$B \rightarrow 1/A$	$S \rightarrow c \rightarrow 01$	$B \rightarrow 110S100$
$c \rightarrow 01$	$B \rightarrow A \rightarrow 0S$	$c \rightarrow 01$
	$\underline{00}$	

	① $S \rightarrow Aa/B$	② $S \rightarrow CBA$	③ $S \rightarrow AB$
	$B \rightarrow A/bbb$	$S \rightarrow B$	$A \rightarrow a$
	$A \rightarrow a/bc/B$	$A \rightarrow CB$	$B \rightarrow C/b$
	$S \rightarrow B$	$S \rightarrow Aa/b/b/A \rightarrow Abbs$	$C \rightarrow D$
	$B \rightarrow A$	$B \rightarrow bbl/a/bc$	$D \rightarrow E$
	$A \rightarrow B$	$B \rightarrow aaa$	$E \rightarrow d/A/b$
	$S \rightarrow B \xrightarrow{bb} A \rightarrow a/bc$	$A \rightarrow albc/bb$	$S \rightarrow A/B$
	$B \rightarrow A \xrightarrow{bb} a/bc, A \rightarrow B \rightarrow bb$		$B \rightarrow C \rightarrow D - E \rightarrow d/A/b$

	Non-unit productions	
	$S \rightarrow AB$	$S \rightarrow A/B$
	$A \rightarrow a$	$A \rightarrow a$
	$B \rightarrow b/a$	$B \rightarrow b/d/b$
	$c \rightarrow a$	$c \rightarrow a$
	$D \rightarrow a$	$D \rightarrow bc$
	$E \rightarrow a$	$E \rightarrow d/A/b$
		$S \rightarrow A/B$
		$B \rightarrow C \rightarrow D - E \rightarrow d/A/b$

$S \rightarrow CBA$	$S \rightarrow CBA$	$S \rightarrow B \rightarrow aaa$	$S \rightarrow B \rightarrow aaa$
$S \rightarrow B$	$S \rightarrow B$	$A \rightarrow CB$	$A \rightarrow CB$
$A \rightarrow CB$	$A \rightarrow CB$	$A \rightarrow AbbsA$	$A \rightarrow AbbsA$
$A \rightarrow Abbs$	$A \rightarrow Abbs$	$B \rightarrow aaa$	$B \rightarrow aaa$
$B \rightarrow aaa$	$B \rightarrow aaa$	$aaa$	$aaa$

Removal of useless symbols:

Let  $G = (N, T, P, S)$  is a context free grammar, a variable  $x$  in  $N$  is said to be useful if & only if there exists a string  $d \in L(G)$  such that

$$S \Rightarrow \alpha_1 X \alpha_2 \Rightarrow d,$$

where  $\alpha_1, \alpha_2 \in (N \cup T)^*$ ,  $X$  is useful because it appears in at least one derivation from  $S$  to a word  $d$ .

Production involving  $X$  is useful, otherwise it is useless.

Eg: ①  $S \rightarrow AB/a$       ② Remove symbols not deriving terminal string.

$$A \rightarrow BC/b$$

$$\overline{B \rightarrow AB/C}$$

$$C \rightarrow AC/B$$

$$N = \{A, B, C, S\}$$

$$T = \{a, b, \epsilon\}$$

② Remove symbols not reachable from  $S$ .

$$\begin{aligned} & \text{① } \{a, b, S, A\} \\ & \text{② } S \rightarrow AB/a \\ & \quad A \rightarrow \underline{BC/b} \Rightarrow S \rightarrow \underline{AB/a} \Rightarrow S \rightarrow a \\ & \quad A \rightarrow b \quad A \rightarrow b \end{aligned}$$

Remove production not reachable from  $S$

$$\text{the } \underline{S \rightarrow a}$$

$$② S \rightarrow AB/AC$$

$$A \rightarrow aAb/bAa/a$$

$$B \rightarrow bba/aaB/AB$$

$$\begin{cases} C \rightarrow abcA/adb \\ P \rightarrow bD/ac \end{cases} \times$$

$$N = \{S, A, B, C\}$$

$$T = \{a, b\}$$

$$\text{① } \{a, b, A, B, S\}$$

$$\text{② } \begin{aligned} & S \rightarrow AB/\cancel{AC} \\ & A \rightarrow aAb/bAa/a \\ & B \rightarrow bba/aaB/AB \end{aligned} \quad \left. \begin{array}{l} \text{equivalent actual} \\ \text{CFG} \end{array} \right\}$$

$S \rightarrow \underline{ABC} \mid B\alpha B$   
 $A \rightarrow \alpha A \mid B\alpha d \mid \alpha aa$   
 $B \rightarrow bBb \mid a$   
 $C \rightarrow CA \mid AC$

②  $S \rightarrow SaA\mid c$       ①  $\{a, b, A, B, S\}$   
 $A \rightarrow a$       ②  $S \rightarrow SaA$   
 $B \rightarrow bb$        $A \rightarrow a$   
 $C \rightarrow ac$        ~~$B \rightarrow bb$~~

$$N = \{A, B, C, S\} \quad \textcircled{1} \quad \{a, b, A, B, S\}$$

$$T = \{a, b, 0\} \quad \textcircled{2} \quad S \rightarrow B \underline{a} \underline{B}$$

$B \rightarrow bBb/a$ : If you add it to the end of  $B$ ,

Example: Consider Contextfree Grammar  $G_1 = (V, T, P, S)$  where write  
 ① possible strings  $S \Rightarrow A, B, C$ ?

Terminals are  $\{a, b\}$  & must appear in the form of strings

Production rule  $S \rightarrow \underline{ABC} | a$  ① {a, b, S, C}

$$\begin{array}{c} A \rightarrow a \\ s \rightarrow a \\ c \rightarrow b \end{array} \quad \textcircled{2} \quad \begin{array}{c} s \rightarrow a \\ A \rightarrow a' \\ c \rightarrow b' \end{array}$$

②  $S \rightarrow aA/bB/a$  3 rules.

$A \rightarrow aB \mid B \mid C$  find equivalent Contextfree Grammar.

$$B \rightarrow b/\ell \quad S \rightarrow a/b \quad \{2, 3, 8, A\} = u$$

$$\textcircled{1} A \rightarrow \epsilon$$

$B \rightarrow E$  *und darüber hinaus*

$$\textcircled{2} \quad S \rightarrow bB/a$$

$s \rightarrow AA$        $\text{dissociation}$        $\text{dissociation products}$

$A \rightarrow aB$   $\text{E}^{\text{diss}}(a, B)$   $\text{E}^{\text{diss}}(A, B)$

A → B       $\neg A \rightarrow \neg B$        $\neg(\neg A \rightarrow B)$

## Normal forms

$$G = (N, T, P, S)$$

where

$\Delta \in N^+$

$A \in N$

$a \in T$

### 1) Weak Chomsky NF (WCNF)

$$\text{eg: } S \rightarrow ASB/AB \quad (A \rightarrow \Delta)$$

$$\begin{array}{l} A \rightarrow a \\ B \rightarrow b \end{array} \quad \left\{ \begin{array}{l} A \rightarrow T \\ B \rightarrow T \end{array} \right.$$

$$A \rightarrow \Delta$$

$$A \rightarrow a \text{ or } A \rightarrow \epsilon$$

### 2) Chomsky NF (CNF)

Let  $G = (N, T, P, S)$  be a context-free grammar, if the productions or production rules are of the form  $A \rightarrow BC$  or  $A \rightarrow a$  where

$A, B, C$  belongs to non-terminal,  $a \in T$  then grammar is said to be

where

$$A \rightarrow BC \quad A, B, C \in N$$

$$A \rightarrow a$$

$$\text{eg: } S \rightarrow AB/AC/Ss$$

$$\begin{array}{l} a \in T \\ A \rightarrow \Delta \\ B \rightarrow \Delta \end{array}$$

CNF.

$$\text{eg: } ② S \rightarrow AS/SB$$

$$A \rightarrow AB/a$$

$$B \rightarrow b$$

$$S \rightarrow SS_1 \leftarrow S \rightarrow SAB$$

$$S_1 \rightarrow AB$$

$$S \rightarrow SS_2 \leftarrow S \rightarrow SBC$$

$$S_2 \rightarrow BC$$

WCNF

$$\begin{array}{l} B \rightarrow BA-B/b \\ C \rightarrow b \end{array}$$

$$S \rightarrow SS_1 | SS_2 | AB$$

$$A \rightarrow AB/a$$

$$B \rightarrow BA-B/b$$

$$C \rightarrow b$$

$$① S \rightarrow IA/OB$$

$$A \rightarrow IAA/OS/O$$

$$B \rightarrow OBB/I$$

→ It is not a chomsky NF

$\{S, A, B\} \rightarrow$  The production rules violating the CNF

$$T = \{0, 1\}$$

$$③ S \rightarrow IA \leftarrow S \rightarrow S_A$$

$$④ S \rightarrow OB \leftarrow S \rightarrow S_B$$

$$S_1 \rightarrow I$$

$$S_2 \rightarrow O$$

$$⑤ A \rightarrow IAA \leftarrow A \rightarrow S_1 S_3$$

$$S_3 \rightarrow AA$$

$$⑥ A \rightarrow OS \leftarrow A \rightarrow S_2 S$$

$$S_2 \rightarrow O$$

$$⑦ B \rightarrow OBB \leftarrow B \rightarrow S_2 S_4$$

$$S_4 \rightarrow BR$$

$$S_1 \rightarrow AB$$

$$S_2 \rightarrow BC$$

→ It is not CNF but in WCNF

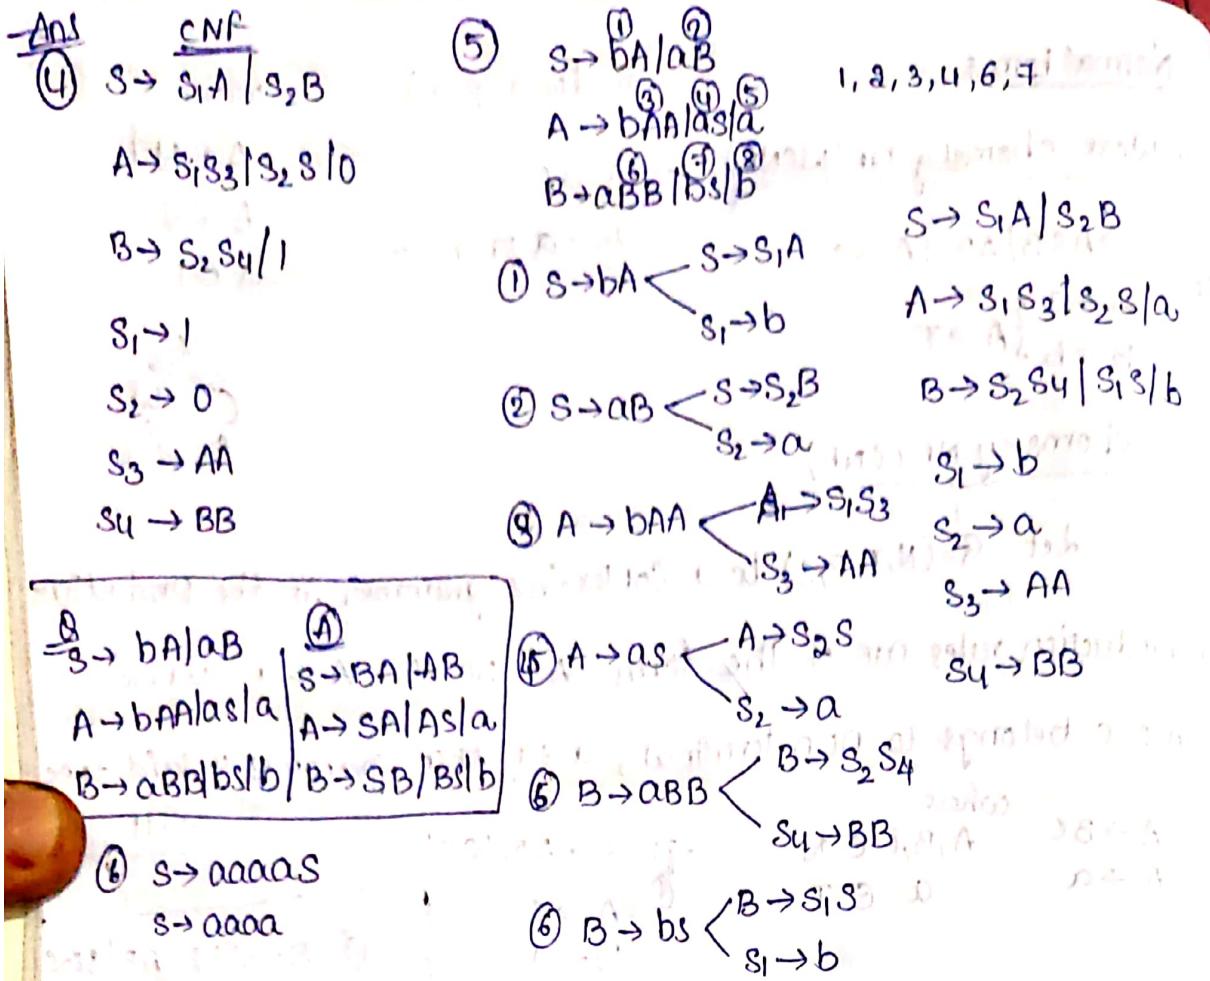

→ Hence for  $S \rightarrow SAB$  production you will

write the equivalent rules are  $S \rightarrow SS_1$  &  $S \rightarrow AB$ .

→ for  $S \rightarrow SBC$  production equivalent rules are

$$S \rightarrow SS_2$$

$$S_2 \rightarrow BC$$

### 3. Strong Chomsky Normal form (SCNF):

Context free grammar  $G = (N, T, P, S)$  is said to be in Strong Chomsky Normal form when rules in  $P$  are of the form  $A \rightarrow a$ ,  $A \rightarrow BC$  where  $A, B, C \in N$ ,  $a \in T$ , Subject to the Conditions if

①  $A \rightarrow BC \in P$ , then  $B \neq C$

②  $A \rightarrow BC \in P$ , then for each rule  $x \rightarrow DE \in P$ ,  $E \neq B, D \neq C$

e.g:

Explain the above conditions with diagram

## Greibach Normal form (GNF):

If grammar  $g = (N, T, P, S)$  be a contextfree grammar, if each rule in production rewrites a variable into a word in  $TN^*$  ( $\text{var} \rightarrow TN^*$ ) that is each rule of the form  $A \rightarrow \alpha\beta$ , where  $A \in T, \alpha \in N^*$ , then grammar is said to be GNF.

Used to construct a Machine PDA (pushDown Automator) for contextfree grammar.

eg: ①  $S \rightarrow abasa / aba$ .

$\rightarrow$  Replace  $A \rightarrow a ; B \rightarrow b$

$S \rightarrow aBASA$

$S \rightarrow aBA$

$A \rightarrow a$

$B \rightarrow b$

②  $S \rightarrow absb / ab$

Replace  $B \rightarrow b$

$S \rightarrow aSB$

$S \rightarrow aB$

③  $S \rightarrow AB$

$A \rightarrow aA / ab / b$

$B \rightarrow b$

Replace  $A \rightarrow a$

$S \rightarrow aB$

$A \rightarrow aA / ab / b$

$B \rightarrow b$

$A \rightarrow a$

$S \rightarrow aB / SB$

$S \rightarrow aA$

$A \rightarrow a$

$B \rightarrow b$

Find CNF and GNF equivalent to the following grammar.

1)  $S \rightarrow SAS$

2)  $E \rightarrow E + E$

$S \rightarrow SVS$

$E \rightarrow E * E$

$S \rightarrow \gamma S$

$E \rightarrow ( E )$

$S \rightarrow ( S )$

$E \rightarrow a$

$S \rightarrow P$

$E \rightarrow a$

$S \rightarrow q$

$E \rightarrow a$

05/02/2020

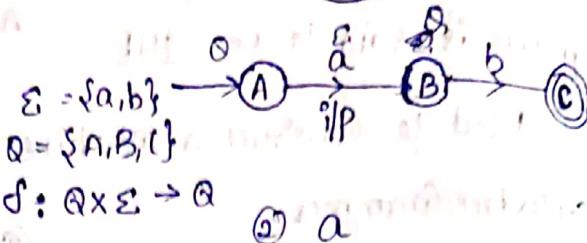

## UNIT-02

- Finite State Machine | Finite State Automaton | finite state automata, non-deterministic finite automata
- Deterministic finite automata
- Non-Deterministic finite Automata

e.g: ①  $(ab)$

FA consists of 5 tuples

$$(Q, \Sigma, \delta, q_0, f)$$

$Q$  = Set of States

$\Sigma$  = Set of alphabets (Terminal symbols)

$\delta$  = Transition function

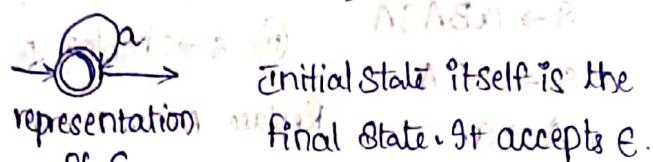

$$\delta: Q \times \Sigma \rightarrow Q$$

$q_0$  = Initial State

$f$  = Final State

Initial state always starts with input arrow →

final state always ends with two circles (double circles). ○

### finite State Automata (FSA):

It is a simplest machine or recognition device.

Figures are called state diagrams.

Nodes represent states with labels inside them.

Initial state is marked with an arrow pointing to it.

Final states are represented as double circles.

Transition from one state to another state is represented by directed edge.

### Deterministic Finite State Automata (DFSA)

formal definition for DFSA is

It is a finite five tuple  $(Q, \Sigma, \delta, q_0, f)$  or  $(k, \Sigma, \delta, q_0, f)$

where  $Q$  is finite set of states

$\Sigma$  is finite set of I/P symbols

$f$  = transition function mapping from one state to another state as

$$f: Q \times \Sigma \rightarrow Q$$

$q_0$  = Input State / Initial State / Start State

$F$  = is subset or equals to  $Q$  set of final states

$$F \subseteq Q$$

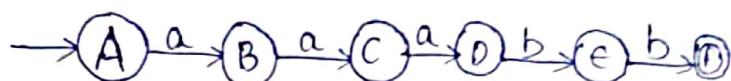

(There can be more than 1 number of final states in machines).

Construct DFA for string aaabb

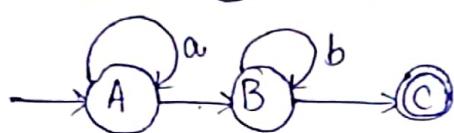

$$Q = \{A, B, C\}$$

$$Q = \{A, B, C, D, E, F\}$$

$$\Sigma = \{a, b\}$$

$$f = Q \times \Sigma \rightarrow Q$$

$$q_0 = A$$

$$F = C$$

26/02/2020

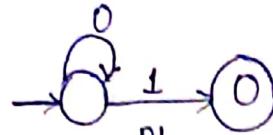

DFA (Deterministic finite state Automata).

In DFA, for some alphabet it goes to one state

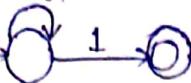

$$f: Q \times \Sigma \rightarrow Q$$

28/02/2020

Deterministic Finite State Automata

NonDeterministic finite state automata

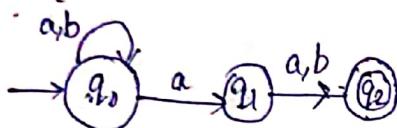

We can Convert NDFSA to DFSA but not from DFSA to NFSA

Steps to Convert NDFSA to DFSA

1. Write all the strings of language
2. NFSA
3. State Transition table for NFSA
4. State Transition table for DFSA
5. DFSA.

e.g:  $L = \{ \text{2nd symbol RHS is 'a'} \}$

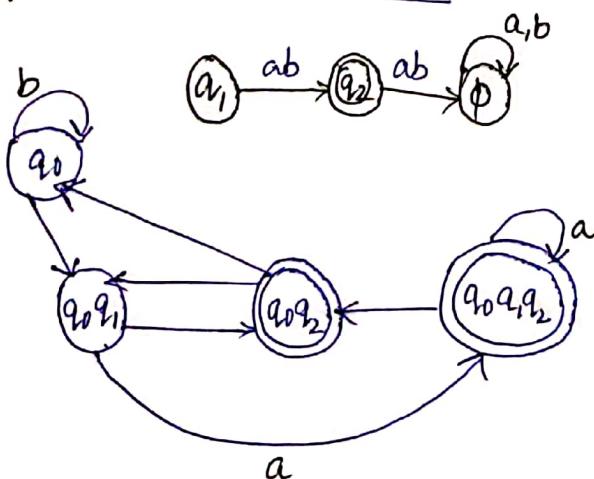

1.  $L = \{ aa, ab, aaa, baa, \dots \}$

3. STT for DFSA

	a	b
$\rightarrow q_0$	$\{q_0, q_1\}$	$q_0$
$q_1$	$q_2$	$q_2$
$* q_2$	D	D
	$\{q_0, q_1\}$ $\{q_0, q_1, q_2\}$ $\{q_0, q_2\}$	
	D	D

5. DFSA

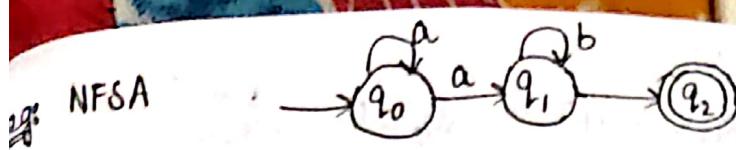

2. STT for NFSA

	a	b
$\rightarrow q_0$	$\{q_0, q_1\}$	$q_0$
$q_1$	$q_2$	$q_2$
$* q_2$	$\emptyset$	$\emptyset$

4. STT for DFSA

	a	b
$\rightarrow q_0$	$\{q_0, q_1\}$	$q_0$
$q_1$	$q_2$	$q_2$
$* q_2$	D	D
	$\{q_0, q_1\}$ $\{q_0, q_1, q_2\}$ $\{q_0, q_2\}$	$\{q_0, q_1\}$ $\{q_0, q_2\}$
	$\{q_0, q_2\}$	$\{q_0, q_1\}$ $q_0$
	$\{q_0, q_1, q_2\}$	$\{q_0, q_1, q_2\}$ $\{q_0, q_2\}$

1. STT for NFSA,

2. STT for DFSA

	a	b		a	b		a	b
$\rightarrow q_0$	$\{q_0, q_1\}$	$\emptyset$	$\rightarrow q_0$	$\{q_0, q_1\}$				
$q_1$	$\emptyset$	$\{q_0, q_2\}$	$q_1$	$\{q_0, q_1\}$	$\{q_0, q_1\}$	$\{q_1, q_2\}$	$\{q_1, q_2\}$	$\{q_1, q_2\}$
$*q_2$	$\emptyset$	$\emptyset$	$*q_2$	$\{q_1, q_2\}$				

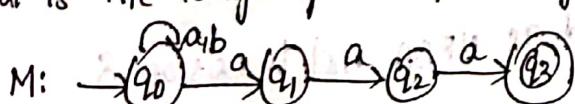

1. Construct DFSA for the language whose language accepts 3rd symbol from RHS is 'b'.

2. Construct DFSA for the language whose language accepts 3rd symbol from LHS is 'b'

3. Convert the following NFSA to DFSA using substitute direction method

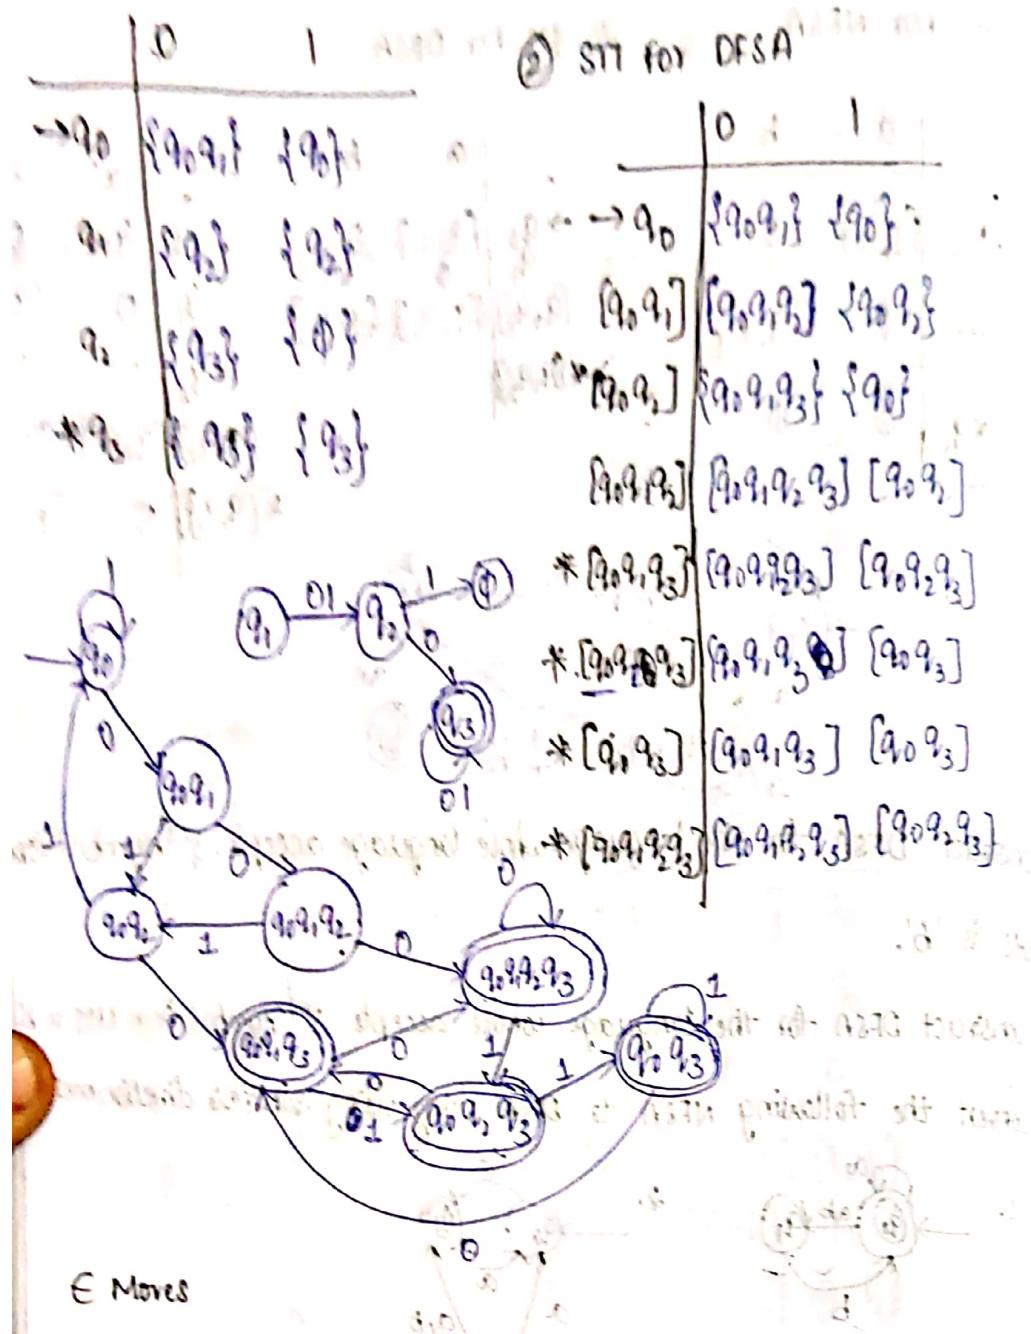

4. What is the language accepted by NFSA M. (Machine)

5. find equivalent DFSA for the following NFSA.

IT for NFSA

$\epsilon$  Moves

NFSA with  $\epsilon$  transitions (Epsilon)

It is a 5 tuple machine  $M$ ,  $M = (K, \Sigma, \delta, q_0, F)$

Where  $K, \Sigma, q_0, F$  are defined as NFSA and transition  $\delta$

$\delta: K \times \Sigma \cup \{\epsilon\} \rightarrow \text{finite subsets of } K$ . It is read as epsilon transition  
 $(\epsilon^*)$  include  $\epsilon$ -transition to NFSA, change the state without reading any symbol represented by  $\epsilon$ -transition.

Construct  $\epsilon$ -NFA for the following

$$\epsilon\text{-closure}(q_0) = \{q_0, q_1\}$$

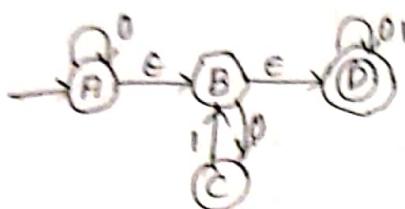

$$\epsilon\text{-closure}(q_1) = \{q_1\}$$

$$\epsilon\text{-closure}(q_2) = \{q_2, q_3\}$$

$$\epsilon\text{-closure}(q_3) = \{q_3\}$$

$$L = \{a^m b^n c^p d^q \mid m, n, p, q \geq 0\}$$

Construct  $\epsilon$ -closure for the following

$$\epsilon\text{-closure}(A) = \{A, B\}$$

$$\epsilon\text{-closure}(B) = \{B, D\}$$

$$\epsilon\text{-closure}(C) = \{C\}$$

$$\epsilon\text{-closure}(D) = \{D\}$$

Now we have to convert  $\epsilon$ -NFA to NFA and then NFA to DFA, but not directly from  $\epsilon$ -NFA to DFA.

Convert  $\epsilon$ -NFA to NFA without  $\epsilon$ -transitions.

1. Transition Table

	0	1	$\epsilon$
$\rightarrow q_0$	$\{q_0\}$	$\emptyset$	$\{q_1\}$
$\rightarrow q_1$	$\emptyset$	$\{q_1\}$	$\emptyset$

2. Find Epsilon closure

$$\epsilon\text{-closure}(q_0) = \{q_0, q_1\}$$

$$\epsilon\text{-closure}(q_1) = \{q_1\}$$

3. Processing States

3.1 For  $q_0$  :-  $\frac{\epsilon^* \text{ under } 0}{\rightarrow q_0 \rightarrow q_0 \rightarrow \{q_0, q_1\}}$

$\frac{\epsilon^* \text{ under } 0}{\rightarrow q_1 \rightarrow \emptyset \rightarrow \emptyset}$

3.2 For  $q_1$  :-  $\frac{\epsilon^* \text{ under } 0}{\rightarrow q_1 \rightarrow \emptyset \rightarrow \emptyset}$

$\frac{\epsilon^* \text{ under } 1}{\rightarrow q_0 \rightarrow \emptyset \rightarrow \emptyset}$

$\frac{\epsilon^* \text{ under } 1}{\rightarrow q_1 \rightarrow \{q_1\} \rightarrow \{q_1\}}$

	$\epsilon^*$ under 0	$\emptyset$	$\epsilon^*$
$*q_1$	$\rightarrow q_1 \rightarrow \emptyset \rightarrow \emptyset$		
	$\epsilon^*$ under 1	$\emptyset$	$\epsilon^*$

$*q_1 \rightarrow q_1 \rightarrow \{q_1\} \rightarrow \{q_1\}$

4. Transition Table

	0	1
$\rightarrow q_0$	$\{q_0, q_1\}$	$\{q_1\}$
$*q_1$	$\emptyset$	$\{q_1\}$

5. NFA

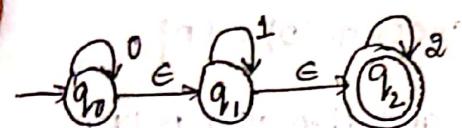

Convert  $\epsilon$ -NFA to NFA without  $\epsilon$ -transitions.

2. Find

1. Transition Table

	0	1	$\epsilon$
$\rightarrow q_0$	$q_0$	$\emptyset$	$q_1$
$q_1$	$\emptyset$	$q_1$	$q_2$
$*q_2$	$q_2$	$q_2$	$\emptyset$

1. Transition Table.

	0	1	2	$\epsilon$
$\rightarrow q_0$	$q_0$	$-$	$-$	$q_1$
$q_1$	$-$	$q_1$	$-$	$q_2$
$*q_2$	$-$	$-$	$-$	$-$

2.  $\epsilon$ -closure( $q_0$ ) =  $\{q_0, q_1\}$

$\epsilon$ -closure( $q_1$ ) =  $\{q_1, q_2\}$ .

$\epsilon$ -closure( $q_2$ ) =  $\{q_2\}$

3. Processing States:

$$\delta(q_0) = \epsilon\text{-closure}[\delta(\epsilon\text{-closure}(q_0), 0)]$$

	$E^*$	$\delta(0, 1)$	$E^*$
$\rightarrow q_0$	$q_0$	$\{q_0, q_1\}$	$q_0$
	$q_1$	$\emptyset$	$\emptyset$

	$E^*$	$\delta(1)$	$E^*$
$\rightarrow q_0$	$q_0$	$\emptyset$	$q_0$
	$q_1$	$\emptyset$	$\emptyset$

	$E^*$	$\delta(1)$	$E^*$
$\rightarrow q_0$	$q_0$	$\emptyset$	$q_0$
	$q_1$	$\{q_1, q_2\}$	$\emptyset$

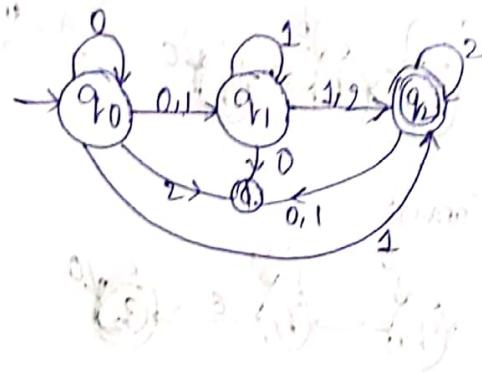

$\delta(q_1)$	$\epsilon^*$	$\delta_1$	$\epsilon^*$	$\epsilon^*$	$\delta_2$	$\epsilon^*$
$q_1 \rightarrow q_1$	$\emptyset$	$\emptyset$	$q_1 \rightarrow q_1, q_2$	$q_1 \rightarrow q_1$	$q_1 \rightarrow q_2$	$q_1 \rightarrow q_2$
$q_2 \rightarrow q_2$	$\emptyset$	$\emptyset$	$q_2 \rightarrow \emptyset$	$q_2 \rightarrow \emptyset$	$q_2 \rightarrow q_1$	$q_2 \rightarrow q_1, q_2$

$\delta(q_2)$	$\epsilon^*$	$\delta_1$	$\epsilon^*$	$\epsilon^*$	$\delta_2$	$\epsilon^*$
$q_1 \rightarrow q_2$	$\emptyset$	$\emptyset$	$q_2 \rightarrow q_2$	$q_2 \rightarrow \emptyset$	$q_2 \rightarrow q_1$	$q_2 \rightarrow q_1, q_2$
$q_2 \rightarrow q_1$	$\emptyset$	$\emptyset$	$q_1 \rightarrow q_2$	$q_1 \rightarrow \emptyset$	$q_1 \rightarrow q_1$	$q_1 \rightarrow q_1, q_2$

4. Transition Table for NFA

	0	1	2
$\rightarrow q_0$	$\{q_0, q_1\}$	$\{q_1, q_2\}$	$\emptyset$
$q_1$	$\emptyset$	$\{q_1, q_2\}$	$\{q_2\}$
$q_2$	$\emptyset$	$\emptyset$	$\{q_2\}$

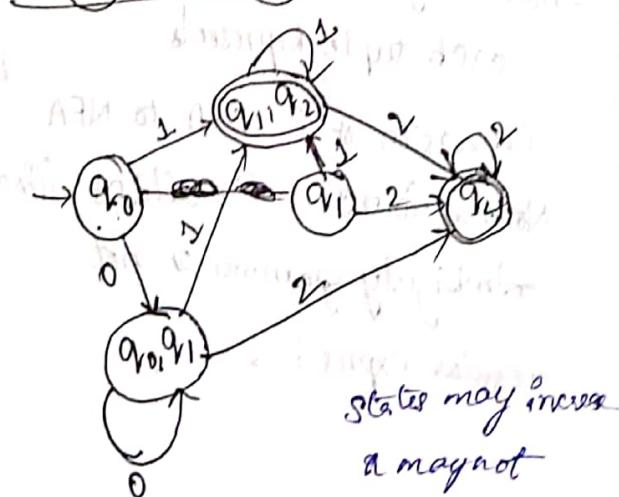

5. Representation of NFA

5. Transition State for DFA

	0	1	2
$\rightarrow q_0$	$\{q_0, q_1\}$	$\{q_1, q_2\}$	$\emptyset$
$\rightarrow q_1$	$\emptyset$	$\{q_1, q_2\}$	$\{q_2\}$
$\rightarrow q_2$	$\emptyset$	$\emptyset$	$\{q_2\}$
$\{q_0, q_1\}$	$\{q_0, q_1\}$	$\{q_1, q_2\}$	$\{q_2\}$
$\{q_1, q_2\}$	$\emptyset$	$\{q_1, q_2\}$	$\{q_2\}$

	0	1	2
$\rightarrow q_0$	$\{q_0, q_1\}$	$\{q_1, q_2\}$	$\emptyset$
$q_1$	$\emptyset$	$\{q_1, q_2\}$	$\{q_2\}$
$q_2$	$\emptyset$	$\emptyset$	$\{q_2\}$

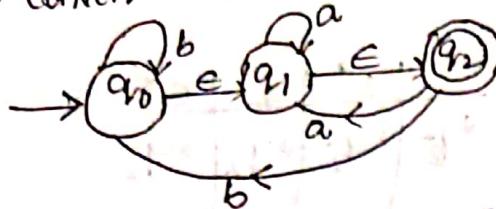

states may increase

## → Regular Expression

Write a Regular expression for the following languages

Set of strings starting with a.

Set of strings ending with a

$$\textcircled{3} \quad (a+b)^* a (a+b)^*$$

$$(a+b)^* \quad a(a+b)^*$$

$$(a+b)(a+b)(a+b) *$$

$$\underline{(a+b)}^{\star} \ a \ (a+b)$$

A diagram of a directed graph with three nodes. The first node is labeled 'a,b' with a small drawing of two eyes above it. An arrow points from this node to a second node labeled 'a'. A third node, represented by a double circle, is labeled 'a,b' with a small drawing of two eyes above it. An arrow points from the second node to this third node.

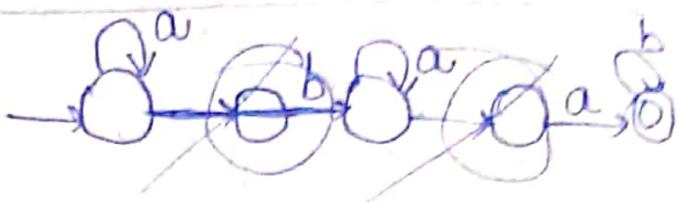

$$(a+b)(a+b) = aa + ab + ba + bb$$

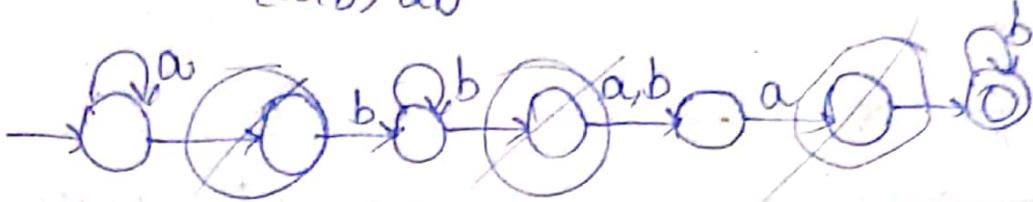

→ Write a Regular expression for the set of strings whose length is divisible by 6.

Ans  $[(a+b)^6]^*$

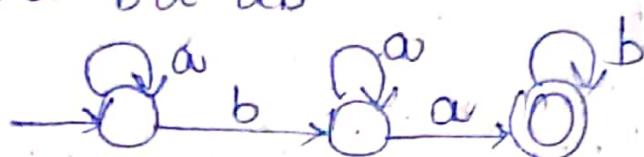

→ ~~a\*~~ ba\*ab\*

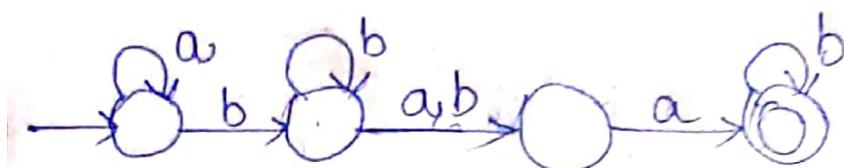

$a^* b b^* (a+b) ab^*$

①  $a^* b a^* ab^*$

②  $a^* b b^* (a+b) ab^*$

FA → RE

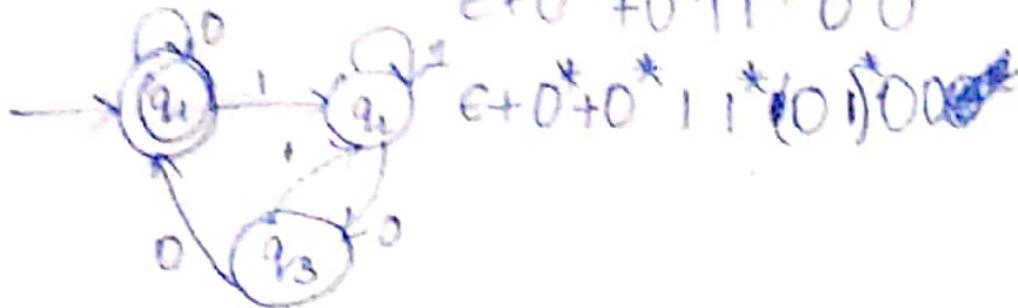

RE → FA

→ Set of strings starting & ending with different symbols  
 $a(a+b)^*b + b(a+b)^*a$

↑ for same symbols

$a(a+b)^*a + b(a+b)^*b$

→ Automata

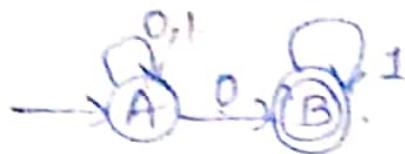

$\epsilon + 0^* + 0^* 1 1^* 0 0$

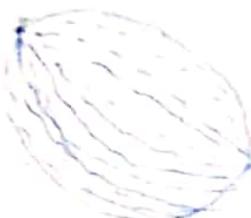

$\epsilon + 0^* + 0^* 1 1^* (0) 0 0$

$\epsilon + 0^* 1 1^* 0 0$

Regular Grammar

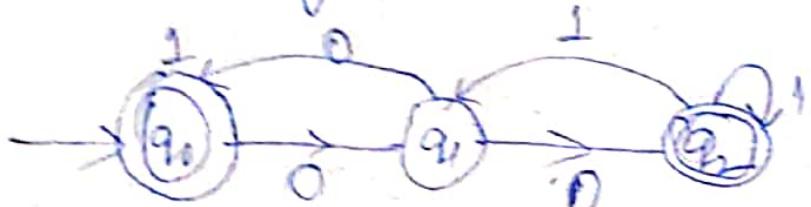

$$\begin{array}{l} A \rightarrow 0B|0A|1A \\ B \rightarrow 1B \end{array} \quad \delta(A, 0) = B$$
$$\delta(B, 1) = B$$

Regular Grammar

construct Regular Grammar for the following NFA

$q_0 \rightarrow 0q_1 1\epsilon$

$q_1 \rightarrow 0q_2 | 0q_0$

$q_2 \rightarrow 1q_2 | 1q_1 0q_1$

Grammar consists of 4 tuples

(N, T, P, S)

Variables
